

Powerful Testing, Simple Execution:

A GUI based penetration testing toolkit

Sponsor: CrowdStrike | Mentor: Ananth Jillepalli

Solo Member: Zachary Adelson

Problem

- ❖ Wide variety of separate tools
- ❖ Steep learning curve for using tools
- ❖ No simple way to move between tools with ease
- ❖ Entirely CLI based interface

Solution

- ❖ A toolkit, known simply as PTP that combines all features into a single unified GUI based application
- ❖ The app, built on PyQT5, makes use of the Qt features and concise GUI framework to build a toolkit that allows for simplicity without sacrificing technical ability

Future Work & Challenges

- ❖ Data encryption
- ❖ Storage of test results
- ❖ Working integrated terminal
- ❖ Remainder of tools
- ❖ Increased breadths of tool capabilities
- ❖ Improved security
- ❖ Limited Time
- ❖ Implementation difficulties
- ❖ Prioritization Shifts

Implemented Features

- ❖ Hashing and Encode/Decode
- ❖ Some service scanning, web enumeration, and password cracking
- ❖ User event logging with timing
- ❖ Tool pinning that saves between sessions

Glossary

CLI – Command-line interface

GUI – Graphical User Interface

PTP - PenTestPocket

PyQT5/Qt – A user interface framework originally designed for C++ implemented into Python

Technologies Used

- ❖ To make PTP a reality I utilized Python3 as the language for the code, the Qt framework to create the GUI, and JSON to store formatting details

Time Spent

Sprint 1 – 59 hours 23 minutes

Sprint 2 – 31 hours 7 minutes

Sprint 3 – 35 hours

Sprint 4 – 34 hours 45 minutes

Total – 160 hours and 15 minutes

Acknowledgments

My sponsor Dayton Dekam, my mentor and coach Ananth Jillepalli
